Keywords

Baking, Bake Mart, e-commerce, recipe application, Android app development

Abstract

Baking is a popular cooking method that continues to grow in popularity, especially with the rise of baking-related content on social media platforms. However, many people, especially beginners, face challenges in getting the right ingredients. Bake Mart app will serve as a one-stop platform where users can easily buy baking ingredients, access trusted recipes from professional chefs, and learn useful tips about ingredient usage and substitutions. Bake Mart simplifies the baking process and creates a supportive community through features like recipe sharing, reviews, and comment sections.

1. Introduction

Baking is a cooking method that uses a dry heat oven with the use of steam to transform raw foods into palatable food. The history of baking dates to ancient Egyptians, who baked primitive flatbread on hot stones. The Egyptians advanced the process of baking by inventing the first ovens and using yeast cells as a raising agent. Additionally, they also invented the first mechanical dough mixer to ease the baking process [1]. This proves that baking has become one of the staple food manufacturing methods serving as both a source of nourishment and a potential source of income. This trend is seen through the increase in the amount of baking-related content on social media such as TikTok, Instagram, and YouTube. Mastering recipes for cakes, biscuits, and other baked goods requires a clear understanding of essential ingredients to produce food that matches the taste and recipe.

Baking relies on many ingredients, each of which contributes to the final product in a specific way. The main ingredients for dry ingredients consist of flour, sugar, and leaveners such as baking powder or soda. The composition of wheat or other grains determines the flour structure through protein formation. This combination is crucial for making the dough rise and enabling a light and fluffy texture. In today's era of globalization, applications have become a primary tool for learning new things such as food recipe applications. Food recipe applications often include social features that allow users to share recipes, photos, and tips from others. With

these social aspects, it can enhance user engagement and foster a sense of community among users that will inspire users to try new recipes and improve their cooking skills [2].

However, several individuals who want to start or continue baking activities often face several challenges, especially in terms of obtaining the ingredients needed for baking. In some places, it can be difficult to find physical stores that sell baking supplies. Additionally, the prices of baking ingredients can be unpredictable and are also only sold in large quantities, namely in bulk. Furthermore, some buyers may not be familiar with the quality of ingredients such as flour, butter, or chocolate that is suitable. This can have an impact even if there is only a slight difference.

Additionally, an e-commerce application that sells baking ingredients and recipes from chefs is proposed to be developed. This application aims to serve as an e-commerce platform for purchasing baking ingredients online more easily, quickly, and user-friendly. In addition, this application provides opportunities for small sellers to market their products more widely through digital platforms eliminating the need for a physical store. Through this application, it can benefit buyers and even support the growth of the local baker community. Therefore, the proposal of this application aligns with the development of modern lifestyles and offers a practical and high-impact digital solution for purchasing baking suppliers.

2. Related works

2.1 Bakery

The bakery industry has seen significant expansion over the years, driven by increasing demand for homemade baked goods and the rise of home-based baking as a hobby [3]. This growth is further supported by the widespread availability of baking resources online, such as recipes, tutorials, and baking ingredient suppliers. In addition, social media platforms like Instagram and TikTok have made baking more accessible and appealing, as users showcase their creations and exchange tips with fellow enthusiasts. Consequently, more people are turning to baking as a form of expression, leading to a surge in home bakers and small-scale businesses entering the market.

The industry is also witnessing a shift in consumer preferences, with many opting for healthier alternatives, such as gluten-free, sugar-free, and organic ingredients. This trend is pushing bakers to innovate and adapt to these demands, which in turn is fueling the development of niche bakery products [4]. While traditional brick-and-mortar bakeries continue to thrive, the digital transformation of the industry offers new opportunities for growth. Home-based bakers and micro-businesses now have the ability to reach a larger audience through e-commerce and mobile platforms, providing a greater level of convenience and choice for consumers.

However, despite the growth in the bakery sector, many home bakers and small-scale businesses still face challenges in sourcing quality ingredients and managing customer orders. The lack of a centralized platform that offers easy access to high-quality, specialized baking products can make it difficult for these entrepreneurs to thrive. Additionally, some users struggle to find the right ingredients for specific recipes, especially when dealing with rare or hard-to-find items. This gap in the market highlights the need for a digital solution that offers a comprehensive range of baking products along with tools to manage the baking process seamlessly.

2.2 Mobile Apps in the Bakery Industry

Mobile applications have increasingly become an essential part of the culinary industry, particularly for those involved in baking. These apps provide a platform for users to learn new baking techniques, discover recipes, and connect with others who share similar interests. The convenience of mobile apps allows users to access baking resources anytime, anywhere, creating a more personalized and accessible experience. From beginner bakers to professionals, mobile apps cater to a wide range of users, offering features like ingredient lists, step-by-step guides, and video tutorials, making the baking process more intuitive and enjoyable [5].

In the context of the bakery sector, mobile apps offer a unique advantage by allowing users to purchase ingredients directly through the app. This feature eliminates the need for users to visit multiple stores in search of baking supplies, streamlining the process and saving time. Additionally, mobile apps in the baking sector often include integration with local stores or e-commerce platforms, allowing users to buy ingredients that may be

difficult to find in physical stores[6]. By facilitating ingredient purchasing directly from the app, users gain easy access to high-quality, reliable products that help ensure the success of their baking ventures.

Mobile apps also enhance engagement within the baking community by offering social features such as recipe sharing, ratings, and reviews. These interactive elements foster a sense of community among bakers, allowing them to share their experiences, troubleshoot issues, and inspire one another with new ideas. The ability to exchange tips and tricks with other users helps build a collaborative environment where both amateur and professional bakers can learn and grow. Additionally, mobile apps for baking often provide features like recipe customization, where users can adjust ingredients or portions according to their preferences or dietary restrictions, further enhancing the app's value[7].

2.3 Potential of Baking Apps in the Market

The market for baking-related mobile applications is expanding rapidly, driven by the increasing popularity of home baking and the convenience offered by digital solutions. In Malaysia, the rise of home-based bakers and small-scale entrepreneurs reflects a growing community that values accessibility, efficiency, and creativity in the kitchen[8]. Despite the availability of generic culinary apps, there remains a lack of specialized platforms that truly cater to the specific needs of bakers particularly those who require both reliable ingredient sourcing and recipe support. This unmet demand presents a clear opportunity for a dedicated baking app to establish a strong foothold in the market.

Furthermore, the integration of shopping functions, recipe databases, and seller support into a single mobile app can significantly streamline the user experience for bakers. By eliminating the need to switch between multiple platforms to find recipes, shop for ingredients, and interact with sellers, a well-designed app can reduce friction and encourage more frequent use. This convenience is especially appealing to hobbyist bakers, students, and small business owners who are often pressed for time and need reliable, one-stop solutions. A mobile app that offers these features could not only improve efficiency but also foster deeper engagement within the baking community[9].

Additionally, as smartphone usage continues to rise, particularly among tech-savvy young adults, the demand for mobile-first applications is increasing. A baking-focused app that embraces this trend can reach a wide user base, from first-time bakers looking for inspiration to experienced sellers looking for a digital storefront. The opportunity to support micro-entrepreneurs by allowing them to list and sell baking-related products such as tools, ingredients, or home-baked goods adds another layer of value. With the right strategy and user-friendly design, a baking app like BakeMart has the potential not only to meet the needs of bakers but also to contribute to local economic empowerment and digital transformation in the baking industry.

2.4 Market Potential Analysis

The demand for digital applications focused on baking is increasing steadily, especially in Malaysia where home-based baking businesses and hobbyists are on the rise. This trend is driven by social media influence, a growing interest in culinary arts, and the convenience of online shopping and mobile learning. However, current solutions are either too general or lack features specifically designed for bakers. While users can find recipes or buy ingredients online, there is no integrated platform that combines these functions in one cohesive app. This creates a clear gap in the market.

The proposed mobile application Bake Mart is designed to address this issue by providing a one-stop solution for baking enthusiasts and small sellers. It integrates curated baking recipes, easy access to ingredients, educational content, and support for micro-sellers to offer baking-related products. Unlike generic recipe apps or e-commerce platforms, BakeMart focuses on delivering a tailored experience specifically for the baking community in Malaysia.

With the increasing use of smartphones, especially among young adults, the app's mobile-first approach can enhance accessibility and convenience. It also supports local economic growth by empowering home-based sellers to reach wider audiences through digital means. By combining inspiration, education, and execution in one platform, BakeMart offers a more complete and satisfying experience for its users.

Table 2.1: Competitive Analysis of Existing Baking Platforms

Competitors	Strength	Weakness	Opportunities	Threats
 Recipe Keeper[10]	- Vast marketplace - Competitive pricing - Fast shipping	- No in-app ingredient purchasing - No community or seller engagement	- Integrate with local stores or marketplaces	- May become outdated if not updated with interactive features
 Tasty[11]	- Visually engaging videos - Step-by-step instructions - Large user base globally	- Not localized for Malaysia - No ingredient shopping or seller integration	- Add shopping/cart integration - Localize recipes for Malaysian ingredients	- Competition from local content creators
 Bakesy[12]	- Dedicated to baking - Offers step-by-step recipes - Ingredient shopping integration	- Limited availability of specialized local ingredients - User base needs growth	- Expand ingredient sourcing locally - Collaborate with small baking businesses	- Other platforms may expand into baking - Integrate similar features
 BakeMart (Proposed App)	- Baking-focused - Local ingredient sourcing - Support for small sellers - Recipe + store integration	- New to market - Needs seller and user base growth	- Collaborate with local bakers - Introduce delivery bundles and subscriptions	- Other apps may adopt similar integrated features

3. Methodology

The Bake Mart mobile application was made in accordance with the Agile approach that focuses on iterative and incremental development. The project was planned as a series of development sprints, each of which aimed at implementing one of the main functional parts of the product user authentication, product listing, tutorial video, and seller dashboard. This enabled modular development, effective integration of features and adaptability to making design or functionality changes throughout the process. Fig. 1 shows the agile sprints.

**Fig 1.** Agile Methodology

This cyclic process enabled the group to adapt to changes effectively and improve the application in small manageable pieces. The project was divided into smaller, prioritized tasks into each sprint, which made the development more focused and achievable. The Agile methodology did not only improve teamwork but also made sure that the most essential functions of the app, like the ability to log in, see the products, and track the orders, were implemented in stages, adding to the general stability and usability of the application.

4. Design and development

The Bake Mart application has been created keeping in mind the functionality, usability, and theme consistency. The design and implementation were well integrated to provide an intuitive and visually appealing user experience. In this section, I will discuss the UI/UX design strategy, the tools involved, and the most important technical planning in the development.

4.1 UI/UX Design

The design had a user-centered orientation, and it was simple, accessible, and with a warm and welcoming look and feel that was in line with the theme of baking. The prevailing yellow color (FBC02D) is used to denote friendliness and vitality.

The design approach focused solely on high-fidelity designs, as the team did not have sufficient time to create low-fidelity wireframes. Therefore, they proceeded directly with high-fidelity mockups using Figma, aiming to closely represent the final look and feel of the application. These designs were then implemented in Flutter. For navigation, a BottomNavigationBar was used to ensure quick and user-friendly access to the main sections of the app, including Home, Products, Orders, Tutorials, and Profile. To illustrate how the design principles were applied, several key pages of the Bake Mart app are highlighted below. These include the Welcome Page, Home Page, and Seller Dashboard, each reflecting the user-centered, visually warm, and functional approach that guided the app's development.

On Fig 2, the Welcome Page serves as the user's first interaction with the Bake Mart app, designed to create a warm and inviting atmosphere. With a background image that reflects the baking theme, the app logo, and cheerful yellow tones, it immediately sets the mood. The page includes direct buttons for login, sign-up, and access to the seller dashboard, making it easy for users and sellers to begin their journey in the app.

Fig 2. Welcome Page

The Home Page is the main landing page of the users and features the top products in terms of baking, categories, and promotions. It is simple and attractive to look at, with ready access to the search capabilities and browsing of products. Besides products, a list of the recipe pages is also present on the home page, so people have access to different baking ideas and inspirations. There is a BottomNavigationBar that will allow users to switch between main sections, like Products, Orders, Tutorials, and Profile, quickly. The interface design of the user home page is presented in fig 3 and the navigation on fig 4.

Fig 3. Home Page

Fig 4. User Navigation Pane

The Seller Dashboard is built specifically for sellers to manage their baking supplies efficiently. It includes key sections like “My Products” where sellers can add, edit, or delete listings, and an “Orders” tab that displays current order statuses with helpful color indicators. The dashboard is user-friendly and allows sellers to monitor their business activity conveniently from one place. Fig 5 shows those pages, then on fig 6 is the seller BottomNavigationBar that will allow users to switch between the three main sections, like “My Product”, “Orders” and “Profile” quickly.

(a)

(b)

Fig. 5 (a) Seller Product Page; (b) Seller Order Page

Fig 6. Seller Navigation Pane

4.2 Tools and Technologies Used

The Bake Mart application was created with the help of the Flutter framework and Dart programming language, which allowed using the cross-platform features to provide the application with effective performance on Android devices. The primary development environment was Visual Studio Code, and the high-fidelity UI designs were created in Figma. Android SDK tools were also used in the project to carry out platform-specific integration.

4.3 Key Features Implemented

The Bake Mart application was created with the aim of serving two primary user types: the general users (customers) and sellers (chefs or baking supply providers). Customers will be able to look through baking ingredients, see the product information, check recipes, and look at tutorial videos. The sellers, in turn, have a special Seller Dashboard to manage their product listings and keep track of customers orders effectively.

One of the most outstanding elements of the app is the Chef Profile page that features individual bakers and their products and tutorials that they share. This assists in making it more personal and interactive, where the user can relate to trusted sources of baking. There is also a Tutorials tab in the app which leads to YouTube videos of baking, sorted by level (beginner, intermediate, advanced). This helps users to acquire new knowledge in baking directly within the application. The user experience is simplified with the help of a BottomNavigationBar which will allow a user to quickly access the most important sections: Home, Products, Orders, Tutorials, and Profile.

5. Results outcome

The Bake Mart mobile application is expected to serve as a centralized platform that integrates the purchasing of baking ingredients, access to curated baking recipes, and educational resources. This integration will enhance user convenience by eliminating the need to switch between multiple platforms, thereby streamlining the baking process for both beginners and experienced users. The application aims to improve user access to high-quality baking ingredients by offering an online marketplace specifically tailored for baking needs. This will be particularly beneficial for users in areas with limited access to physical baking supply stores, ensuring they can source ingredients efficiently and reliably.

Bake Mart is also expected to empower small-scale sellers and home-based bakers by providing a digital storefront to promote and sell their products. This feature will contribute to the growth of the local economy by supporting micro-entrepreneurs in reaching a broader customer base without requiring a physical presence. In addition to commercial features, the app will serve an educational purpose by offering step-by-step tutorials, ingredient usage tips, and substitute guides. These features are intended to improve users' baking skills and reduce common errors caused by a lack of knowledge, especially among beginners.

The inclusion of community features such as recipe sharing, user reviews, and comment sections is expected to foster engagement among users. This will create a collaborative environment where users can exchange ideas, receive feedback, and stay motivated in their baking journey. Bake Mart is expected to differentiate itself from existing platforms by offering a baking-specific, localized, and mobile-first solution. Unlike generic food or shopping apps, it will cater directly to the needs of baking enthusiasts, addressing a gap currently present in the Malaysian market.

1. Welcome Page

When the user first opens the BakeMart app, they are greeted with a welcome screen featuring the app logo and description. To start using the app, the user must either tap the "Login" button (as shown by the arrow) if they already have an account or select "Sign Up" if they are new. There is also an option to go to the Seller Dashboard, which is specific for sellers.

2. Login Page

After clicking the "Login" button, the user is directed to the login page. Here, they can enter their email and password, then tap on the "Log In" button to access their account. If they do not have an account, they can tap on the "Sign up" link (highlighted by the arrow) to register.

3. Registration Page

Upon tapping the "Sign up" link, the user is brought to the registration form. They must fill in their full name, phone number, email, password, and confirm password. Once completed, clicking the "Register" button will create their account. If they realize they already have an account, they can tap the "Log in" link at the bottom.

4. Home Page

After logging in, users are directed to the main shop screen. At the top, there's a section labeled BAKER'S RECIPE, showcasing featured chefs. The user can tap on Chef Wan as indicated by the arrow to view recipes by this chef. Below this section are product categories such as flour, spices, dairy products, and flavoring.

5. Chef Profile Page

Once Chef Wan is selected, the app displays his profile along with a short bio. Below it, users can see a list of recipes curated by him. The user can tap on the "Butter Cake" recipe image to view the full recipe.

6. Recipe Page

On this page, the user can view the Butter Cake recipe in full detail. The image of the cake is displayed at the top, followed by the list of ingredients and step-by-step instructions. This helps users follow the recipe while baking.

7. Home Page

If users want to explore more chefs beyond the three shown, they can tap the "More Chef" button shown by the arrow on the top-right of the Baker's Recipe section.

8. Meet Our Chefs Page

The app then navigates to the "Meet Our Chefs" page, which lists all available chefs along with short descriptions. Users can scroll through and tap on any chef they are interested in. For example, tapping on Chef Zam indicated by the arrow will open his profile and recipes.

9. Chef Profile Page

When users tap on Chef Anis, they are taken to her profile page. A brief introduction is shown at the top, followed by her available recipes. Users can then tap on a recipe such as Red Velvet Cupcake to learn how to prepare it.

10. Homepage

The user begins at the Home Shop page of the BakeMart app, where various product categories like Flour, Spices, Dairy Product, and Flavouring are displayed. Users can tap on any category to explore relevant items. In this case, the arrow points to the “Flour” category, guiding the user to tap and view available flour-related products.

11. Product List Page

After tapping on the Flour category, the user is brought to the Product List page, where flour-based recipes are shown. Users can use the search bar to look up specific recipes. Here, “chocolate cake” is typed in, and matching results appear in the list below. The arrow points to the heart icon, which allows users to favorite recipes.

12. Recipe Details Page

Tapping on the Chocolate Cake item brings the user to the recipe detail page. It includes the price, ingredients, tutorial steps, and baking tips. Users can scroll through this page to follow the instructions and learn how to bake the selected recipe. The “Back to Product List” button at the bottom allows the user to return to the previous page.

13. Product Details

The user can add a product from the button in the product details. They can choose to add all ingredients to the cart or just one ingredient. They can also view the product details before adding it to the cart. After this, it will bring the user to the cart menu.

14. Homepage

Returning to the home screen, the arrow indicates that the user should tap on the Cart tab located in the bottom navigation bar. This section allows users to view items they've added for purchase.

15. My Cart Page

On the My Cart page, users can review all selected items, adjust quantities, and check the total price. The highlighted button, "Proceed to Checkout," should be tapped to continue the order process.

16. Checkout Page

The Checkout page displays the shipping address, payment method such as credit/debit card, and order summary. After confirming the details, users tap "Place Order" to finalize the purchase. After the user has filled in the details for delivery. The user will press the place order button.

17. Order Tracking Page

After placing an order, the user is directed to the Order Tracking page, which provides live status updates such as Order Placed, Processing, Shipped to monitor delivery progress.

18. Homepage

On the home page, users can tap the Tutorial tab in the bottom navigation bar, as indicated by the arrow, to access baking guides and video tutorials.

19. My Tutorial Page

The My Tutorial page organizes content by difficulty Beginner, Intermediate, and Advanced. The arrow points to a Beginner tutorial, "How to Bake a Perfect Chocolate Cake." Tapping this opens up a more in-depth guide.

20. External Video Content Page

Once the tutorial is selected, users are redirected to an external video platform such as TikTok or YouTube where they can watch a step-by-step demonstration. This integration helps enhance the user's learning experience through engaging visual content.

21. Home Page

To proceed to the user profile section, the user should tap on the "Account" icon located at the bottom right of the navigation bar as indicated by the arrow.

22. Profile Page

After tapping the Account icon, the user is directed to the My Profile page. Here, the user can view their personal details such as name, email, and phone number. The profile picture is also displayed at the top. If the user wishes to log out, they can do so by clicking the "Log Out" button in red, highlighted with an arrow in the image. This button is centrally placed under the personal details section.

23. Log Out Confirmation Page

Once the "Log Out" button is tapped, a confirmation dialog box appears asking the user to confirm their decision to log out. To proceed with logging out, the user must tap the red "Log Out" button in the dialog box, as shown by the arrow. If the user changes their mind, they can tap "Cancel" to remain on the profile page.

24. Admin - My Products Page

This screen is part of the seller/admin interface in the BAKEMART app. It shows the My Products page where sellers can manage their inventory. Each item is listed with its name, price, and available stock. Sellers can tap the three-dot menu next to any product to Edit or Delete the item. To add a new product, they can tap the yellow “+” button in the bottom right corner. To manage customer orders, the seller should tap the “Orders” icon in the bottom navigation bar, as indicated by the arrow.

25. Admin - Orders Page

This screen shows the Orders section where the seller can view and update all customer orders. Each order is labeled with an order number, customer name, and items ordered. The seller can manage the progress of each order using the dropdown menu, where the status can be set to Pending, Preparing, or Delivered. This helps sellers keep track of fulfillment efficiently. To view or update their business profile, the seller can proceed by tapping the “Profile” icon in the bottom navigation bar as pointed to by the arrow.

26. Admin - Profile Page

This is the Profile page for the seller or admin. It displays important business details such as the business name, email, contact number, location, and the year the business started. Sellers can keep their information up to date by tapping the “Edit Profile” button. This page ensures transparency and credibility for customers browsing seller details in the app.

6. Discussion and Conclusion

6.1 Discussion

The development of the Bake Mart mobile application highlights the increasing relevance of digital solutions in supporting both culinary enthusiasts and small-scale baking entrepreneurs in Malaysia. Through the integration of e-commerce and recipe features, the app offers a user-centered platform tailored specifically for baking needs. The project successfully addressed a notable market gap by providing a solution that merges ingredient sourcing, educational resources, and seller support within a single application.

From a technical perspective, the use of Flutter enabled cross-platform development while ensuring performance consistency across devices. The design strategy, emphasizing simplicity and warmth, contributed to an intuitive user experience that aligns with the creative and nurturing nature of baking. Agile methodology facilitated iterative progress, allowing the team to adapt features based on evolving requirements and time constraints. One of the key innovations in Bake Mart is the inclusion of a Chef Profile page and tutorial integration, which not only personalizes the user journey but also serves an educational purpose. These features help build trust and encourage engagement from users who may be new to baking. Additionally, the Seller Dashboard empowers micro-entrepreneurs by simplifying product management and order tracking, ultimately promoting local economic participation through digital means.

However, despite the promising design and features, the application faces several challenges ahead. As a new entrant in the market, it requires strategic efforts to build a user base and attract reliable ingredient sellers. The success of the app will depend significantly on its ability to sustain user engagement, ensure consistent ingredient availability, and foster a strong community around baking culture. Future enhancements could include payment integration, delivery tracking, personalized recipe recommendations, and AI-based substitutions for unavailable ingredients.

6.2 Conclusion

In conclusion, the Bake Mart application serves as a comprehensive digital platform tailored specifically for the baking community in Malaysia, combining ingredient sourcing, curated recipes, tutorial content, and seller support into a single mobile solution. By addressing common challenges faced by both home bakers and small-scale entrepreneurs, the app enhances convenience, promotes learning, and supports local economic growth. With its user-friendly interface, localized content, and community-driven features, Bake Mart has the potential to fill a crucial gap in the market and become a valuable tool for fostering a more connected and empowered baking ecosystem.
